

Detailed Business Process & Automation Proposal

ERP & CRM Solution for Share-Based Real Estate Development Company

1. Executive Overview

This document presents a comprehensive understanding of a **share-based real estate land development business model** and proposes a **fully integrated ERP & CRM-based automation solution** to streamline operations, ensure financial and governance transparency, strengthen investor confidence, and enable scalable growth.

The proposal is prepared considering the real-life operational practices of share-based real estate organizations in Bangladesh and similar markets. It reflects both **industry experience in real estate development** and **proven expertise in enterprise software solutions**, ensuring practical applicability rather than theoretical automation.

2. Executive Summary

2.1 Urban Homes – Real Estate Industry Experience

Urban Homes is a well-established real estate development company in Bangladesh, recognized for delivering **quality residential projects with a strong focus on transparency, customer trust, and long-term value creation**. The organization has successfully planned, developed, and delivered multiple residential projects in prime urban locations, following structured development, sales, and handover processes.

Urban Homes' operational experience closely aligns with the **share-based and customer-centric real estate development model**, where investor confidence, phased construction, cost control, and continuous communication play a critical role. The company has demonstrated strong capabilities in:

- End-to-end project lifecycle management, from land selection to project handover
- Managing multiple stakeholders including buyers, investors, contractors, and authorities
- Phase-wise construction execution and fund utilization
- Maintaining transparency in project progress, cost utilization, and client communication

This practical industry experience provides a solid foundation for defining realistic business processes and automation requirements within the proposed ERP & CRM solution.

2.2 Opus Technology Limited – Digital Transformation & Automation Expertise

Opus Technology Limited is a professional software development and digital transformation company specializing in **customized ERP systems, CRM platforms, financial systems, and enterprise-grade automation solutions**. Since its establishment, Opus has supported organizations across multiple industries by automating complex operational workflows and improving data-driven decision-making.

Opus brings the following strengths to this initiative:

- Proven experience in **custom ERP development** aligned with real-world business processes
- Specialized **CRM solutions for member-based and client-centric organizations**
- Strong understanding of financial systems, project costing, and compliance requirements
- Scalable, secure, and modular system architecture suitable for multi-project environments

The combination of **Urban Homes’ real estate domain experience** and **Opus Technology’s software expertise** ensures that the proposed solution is both operationally practical and technologically robust.

3. Business Model Understanding (Detailed)

The organization operates multiple real estate development projects using a **share-selling investment model**, where:

- Each project is treated as an independent financial and operational entity
- Investors purchase defined shares equivalent to future flat or unit ownership
- A Project Management Committee is formed from shareholders
- All major project decisions are taken collectively and formally documented
- Land acquisition, construction, and development costs are funded through phased share collections
- The company earns a **management fee of 10%–15%** based on approved project costing

This model requires **strong governance, disciplined financial control, structured communication, and complete transparency** across all operational stages.

4. Detailed As-Is Business Process Flow

3.1 Project Initiation & Land Selection

- Identification of potential land parcels

- Preliminary feasibility analysis (location, size, zoning)
- Internal approval for project initiation
- Manual documentation of land details

3.2 Project Planning & Share Structuring

- Determination of total buildable flats/units
- Conversion of flats into defined share units
- Pricing of each share
- Preparation of project investment proposal

3.3 Share Marketing & Sales

- Marketing shares to potential investors
- Manual tracking of interested clients
- Share booking and confirmation
- Creation of preliminary shareholder records

3.4 Committee Formation & Governance

- Formation of Project Management Committee
- Recording committee members and roles
- Manual meeting arrangements
- Decisions recorded in physical documents or emails

3.5 Land Purchase & Legal Documentation

- Collection of initial share funds
- Land purchase execution
- Legal documentation storage (often scattered)

3.6 Plan Approval & Construction Execution

- Government plan approval
- Contractor appointment
- Construction phase breakdown
- Phase-wise budgeting

3.7 Phase-Based Share Collection

- Demand notice issuance
- Collection tracking (cash/bank)
- Manual ledger maintenance per shareholder

3.8 Communication & Notice Management

- Meeting notices via phone/email

- Decision communication without centralized tracking
- No structured communication history

3.9 Procurement & Cost Control

- Vendor selection
- Manual quotation comparison
- Purchase approvals
- Limited cost transparency

3.10 Financial Closing & Reporting

- Project-wise expense summaries
 - Management fee calculation
 - Delayed or inaccurate reporting
-

5. Key Operational Challenges Identified

- Fragmented data across departments
 - Manual errors in member ledger and collections
 - Limited financial transparency for shareholders
 - Difficulty managing multiple projects simultaneously
 - Weak audit trail and governance documentation
 - Communication gaps leading to trust issues
-

6. Proposed Solution Architecture

An **Integrated ERP & CRM Platform** with project-centric architecture, where each project operates independently but under a centralized management system.

7. ERP Modules – Detailed Functional Scope

6.1 Project & Land Management Module

- Multi-project setup and configuration
- Land details (location, size, deed, legal documents)
- Flat/unit configuration
- Share mapping per unit
- Project lifecycle tracking

6.2 Construction & Phase Management

- Construction phase definition
- Phase-wise budget allocation
- Progress tracking
- Cost vs budget comparison
- Contractor performance monitoring

6.3 Finance, Accounting & Costing Module

- Project-wise chart of accounts
- Budget vs actual tracking
- Phase-based cost allocation
- Automated management fee calculation (10%–15%)
- Profit & loss per project
- Cash & bank management
- Audit-ready financial records

6.4 Procurement & Vendor Management

- Vendor master database
 - RFQ & quotation comparison
 - Purchase approval workflows
 - Purchase orders
 - Goods receipt & bill verification
 - Payment tracking
 - Full audit trail for transparency
-

8. CRM Modules – Detailed Functional Scope

7.1 Shareholder / Member Management

- Centralized investor database
- Project-wise share allocation
- Committee member tagging
- KYC & document storage

7.2 Share Ledger & Collection Management

- Individual shareholder ledger
- Phase-wise demand generation
- Collection tracking
- Outstanding balance monitoring

- Auto-generated statements

7.3 Communication & Engagement Management

- Meeting & notice management
- SMS / Email / WhatsApp integration
- Decision announcements
- Communication history logs

7.4 Shareholder Self-Service Portal (Optional)

- Login-based access
 - Personal ledger view
 - Project updates
 - Notice and decision archive
-

9. Governance, Decision & Compliance Automation

- Digital committee formation
 - Meeting minutes recording
 - Decision documentation
 - Approval workflows
 - Role-based access control
-

10. Management Dashboard & Analytics

10.1 Executive Dashboard

- Project-wise status overview
- Total shares sold vs unsold
- Collection vs expenditure
- Management fee and income summary

10.2 Compliance & Audit Dashboard

- Approval history
 - Procurement transparency reports
 - Financial audit trails
-

11. System Architecture Diagram (ERP + CRM)

The proposed solution follows a **modular, service-oriented architecture**, ensuring scalability, security, and seamless integration between ERP and CRM components.

Architecture Highlights

- **Project-Centric Design:** Each real estate project operates independently while remaining centrally controlled
- **Tight ERP–CRM Integration:** Financial and operational data flows seamlessly between systems

- **Role-Based Access Control:** Management, committee members, accounts, and shareholders see only relevant data
 - **Audit & Transparency by Design:** Every transaction, approval, and communication is traceable
 - **Scalable & Future-Ready:** Supports additional projects, users, and modules without restructuring
-

11. Business Value & Growth Enablement

- Improved investor confidence
 - Faster decision-making
 - Reduced operational risk
 - Easy scalability for new projects
 - Strong compliance & governance framework
-

12. Implementation Methodology

1. Business Process Mapping & Requirement Workshop
 2. Module-wise System Design
 3. Custom Development & Configuration
 4. Data Migration
 5. User Training & UAT
 6. Go-Live & Support
-

13. Our Experience & Capability

- Proven expertise in Custom ERP development
 - Strong CRM systems for member-based organizations
 - Real-life experience in financial & project-based systems
 - Scalable, secure, and future-ready architecture
-

14. Conclusion

This ERP & CRM solution will transform the organization into a **digitally governed, transparent, and scalable real estate enterprise**, enabling sustainable growth while maintaining investor trust.

This document can be further converted into a detailed presentation, commercial proposal, or system requirement specification (SRS) as needed.
