

Detailed Business Process & Automation Proposal

ERP & CRM Solution for Share-Based Real Estate Development Company

1. Executive Overview

This document presents a comprehensive understanding of a **share-based real estate land development business model** and proposes a **fully integrated ERP & CRM-based automation solution** to streamline operations, ensure financial and governance transparency, strengthen investor confidence, and enable scalable growth.

The proposal is prepared considering the real-life operational practices of share-based real estate organizations in Bangladesh and similar markets. It reflects both **industry experience in real estate development** and **proven expertise in enterprise software solutions**, ensuring practical applicability rather than theoretical automation.

2. Executive Summary

2.1 Urban Homes – Real Estate Industry Experience

Urban Homes is a well-established real estate development company in Bangladesh, recognized for delivering **quality residential projects with a strong focus on transparency, customer trust, and long-term value creation**. The organization has successfully planned, developed, and delivered multiple residential projects in prime urban locations, following structured development, sales, and handover processes.

Urban Homes' operational experience closely aligns with the **share-based and customer-centric real estate development model**, where investor confidence, phased construction, cost control, and continuous communication play a critical role. The company has demonstrated strong capabilities in:

- I. End-to-end project lifecycle management, from land selection to project handover
- II. Managing multiple stakeholders, including buyers, investors, contractors, and authorities
- III. Phase-wise construction execution and fund utilization
- IV. Maintaining transparency in project progress, cost utilization, and client communication

This practical industry experience provides a solid foundation for defining realistic business processes and automation requirements within the proposed ERP & CRM solution.

2.2 Opus Technology Limited – Digital Transformation & Automation Expertise

Opus Technology Limited is a professional software development and digital transformation company specializing in **customized ERP systems, CRM platforms, financial systems, and**

enterprise-grade automation solutions. Since its establishment, Opus has supported organizations across multiple industries by automating complex operational workflows and improving data-driven decision-making.

Opus brings the following strengths to this initiative:

- I. Proven experience in **custom ERP development** aligned with real-world business processes
- II. Specialized **CRM solutions for member-based and client-centric organizations**
- III. Strong understanding of financial systems, project costing, and compliance requirements
- IV. Scalable, secure, and modular system architecture suitable for multi-project environments

The combination of **Urban Homes' real estate domain experience** and **Opus Technology's software expertise** ensures that the proposed solution is both operationally practical and technologically robust.

3. Business Model Understanding (Detailed)

The organization operates multiple real estate development projects using a **share-selling investment model**, where:

- I. Each project is treated as an independent financial and operational entity
- II. Investors purchase defined shares equivalent to future flat or unit ownership
- III. A Project Management Committee is formed from shareholders
- IV. All major project decisions are taken collectively and formally documented
- V. Land acquisition, construction, and development costs are funded through phased share collections
- VI. The company earns a **management fee of 10%–15%** based on approved project costing

This model requires **strong governance, disciplined financial control, structured communication, and complete transparency** across all operational stages.

4. Detailed As-Is Business Process Flow

3.1 Project Initiation & Land Selection

- I. Identification of potential land parcels
- II. Preliminary feasibility analysis (location, size, zoning)
- III. Internal approval for project initiation
- IV. Manual documentation of land details

3.2 Project Planning & Share Structuring

- I. Determination of total buildable flats/units
- II. Conversion of flats into defined share units

- III. Pricing of each share
- IV. Preparation of project investment proposal

3.3 Share Marketing & Sales

- I. Marketing shares to potential investors
- II. Manual tracking of interested clients
- III. Share booking and confirmation
- IV. Creation of preliminary shareholder records

3.4 Committee Formation & Governance

- I. Formation of Project Management Committee
- II. Recording committee members and roles
- III. Manual meeting arrangements
- IV. Decisions recorded in physical documents or emails

3.5 Land Purchase & Legal Documentation

- I. Collection of initial share funds
- II. Land purchase execution
- III. Legal documentation storage (often scattered)

3.6 Plan Approval & Construction Execution

- I. Government plan approval
- II. Contractor appointment
- III. Construction phase breakdown
- IV. Phase-wise budgeting

3.7 Phase-Based Share Collection

- I. Demand notice issuance
- II. Collection tracking (cash/bank)
- III. Manual ledger maintenance per shareholder

3.8 Communication & Notice Management

- I. Meeting notices via phone/email
- II. Decision communication without centralized tracking
- III. No structured communication history

3.9 Procurement & Cost Control

- I. Vendor selection
- II. Manual quotation comparison
- III. Purchase approvals
- IV. Limited cost transparency

3.10 Financial Closing & Reporting

- I. Project-wise expense summaries
- II. Management fee calculation
- III. Delayed or inaccurate reporting

5. Key Operational Challenges Identified

- I. Fragmented data across departments
- II. Manual errors in the member ledger and collections
- III. Limited financial transparency for shareholders
- IV. Difficulty managing multiple projects simultaneously
- V. Weak audit trail and governance documentation
- VI. Communication gaps leading to trust issues

6. Proposed Solution Architecture

An **Integrated ERP & CRM Platform** with project-centric architecture, where each project operates independently but under a centralized management system.

7. ERP Modules – Detailed Functional Scope

6.1 Project & Land Management Module

- I. Multi-project setup and configuration
- II. Land details (location, size, deed, legal documents)
- III. Flat/unit configuration
- IV. Share mapping per unit
- V. Project lifecycle tracking

6.2 Construction & Phase Management

- I. Construction phase definition
- II. Phase-wise budget allocation
- III. Progress tracking
- IV. Cost vs budget comparison
- V. Contractor performance monitoring

6.3 Finance, Accounting & Costing Module

- I. Project-wise chart of accounts
- II. Budget vs actual tracking
- III. Phase-based cost allocation
- IV. Automated management fee calculation (10%–15%)
- V. Profit & loss per project
- VI. Cash & bank management
- VII. Audit-ready financial records

6.4 Procurement & Vendor Management

- I. Vendor master database
- II. RFQ & quotation comparison

- III. Purchase approval workflows
- IV. Purchase orders
- V. Goods receipt & bill verification
- VI. Payment tracking
- VII. Full audit trail for transparency

8. CRM Modules – Detailed Functional Scope

7.1 Shareholder / Member Management

- I. Centralized investor database
- II. Project-wise share allocation
- III. Committee member tagging
- IV. KYC & document storage

7.2 Share Ledger & Collection Management

- I. Individual shareholder ledger
- II. Phase-wise demand generation
- III. Collection tracking
- IV. Outstanding balance monitoring
- V. Auto-generated statements

7.3 Communication & Engagement Management

- I. Meeting & notice management
- II. SMS / Email / WhatsApp integration
- III. Decision announcements
- IV. Communication history logs

7.4 Shareholder Self-Service Portal (Optional)

- I. Login-based access
- II. Personal ledger view
- III. Project updates
- IV. Notice and decision archive

9. Governance, Decision & Compliance Automation

- I. Digital committee formation
- II. Meeting minutes recording
- III. Decision documentation
- IV. Approval workflows
- V. Role-based access control

10. Management Dashboard & Analytics

9.1 Executive Dashboard

- I. Project-wise status
- II. Total shares sold vs unsold
- III. Collection vs expenditure
- IV. Management income summary

9.2 Compliance & Audit Dashboard

- I. Approval history
- II. Procurement transparency reports
- III. Financial audit trails

11. Business Value & Growth Enablement

- I. Improved investor confidence
- II. Faster decision-making
- III. Reduced operational risk
- IV. Easy scalability for new projects
- V. Strong compliance & governance framework

12. Implementation Methodology

- I. Business Process Mapping & Requirement Workshop
- II. Module-wise System Design
- III. Custom Development & Configuration
- IV. Data Migration
- V. User Training & UAT
- VI. Go-Live & Support

13. Our Experience & Capability

- I. Proven expertise in Custom ERP development
- II. Strong CRM systems for member-based organizations
- III. Real-life experience in financial & project-based systems
- IV. Scalable, secure, and future-ready architecture

14. Conclusion

This ERP & CRM solution will transform the organization into a **digitally governed, transparent, and scalable real estate enterprise**, enabling sustainable growth while maintaining investor trust.
